City of Victorville Expands Utilities Offerings

City Approves Wholesale Distribution Load Interconnection Facilities Agreement with Southern California Edison

Industrial Wastewater Treatment Plant

Victorville, Calif. – November 20, 2014 – The [City of Victorville](#) announced today that it is expanding its utilities offerings for electrical services and industrial wastewater treatment. Victorville has approved a Wholesale Distribution Load Interconnection Facilities Agreement (IFA) with Southern California Edison that will enable the City to provide electricity to additional large scale commercial users. Additionally, Victorville’s Water District issued its first industrial pretreatment permit since having constructed its 2.5 million-gallon-per-day Industrial Wastewater Treatment Plant for the Dr. Pepper Snapple Group manufacturing plant.

“The expansion of our utilities offerings exemplifies our dedication to creating a competitive advantage for the businesses that occupy Victorville’s commercial properties,” said Keith Metzler, assistant city manager at the City of Victorville.

Victorville will distribute electricity to commercial users through an expansion of its local distribution system, which will be connected with the statewide power grid through Southern California Edison. The provision of this form of electricity is similar to how Victorville provides power to industrial tenants at the [Southern California Logistics Airport \(SCLA\)](#), including Dr. Pepper Snapple Group and The Boeing Company. In comparison to the offerings of local investor-owned utilities, the electricity that Victorville provides will create competitive savings for large-scale commercial users locating in Victorville. The first commercial user affected by the IFA is St. Mary’s Medical Center project, which is currently under construction along Amargosa Road and Interstate-15.

Victorville’s latest industrial wastewater pretreatment permit was issued to Leading Edge Aircraft Services, allowing the discharge of certain industrial waste that is the byproduct of washing newly manufactured aircraft, prior to being painted with a new airline livery. The permit will create efficiencies and savings for Leading Edge by omitting the company’s requirement to haul off their industrial waste. After treatment, the Industrial Wastewater Treatment Plant will return reclaimed water for industrial consumption.

“The City anticipates several commercial deals as a result its utilities expansion,” said Metzler.

About The City of Victorville

611 Anton Blvd, Suite 140
Costa Mesa, CA 92626
